MikroDuino Nano

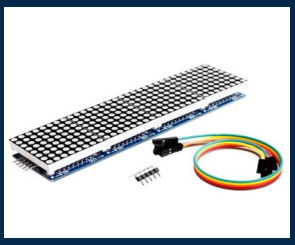

Learn and Explore Arduino | Easy to Use | No Soldering | Plug N Play

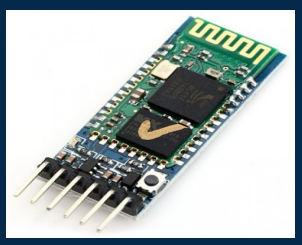

Based upon Arduino Nano, This board offers pre-built circuitry and connectors to commonly used modules for rapid prototyping. No more loose breadboard connections, Most connections are made using tab jumpers, or simple female-female jumper wires. Easy expansion to other electronics using standard fully labelled jumper headers.

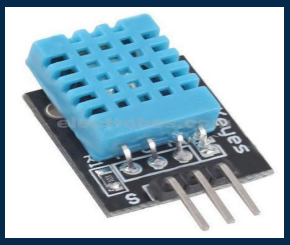

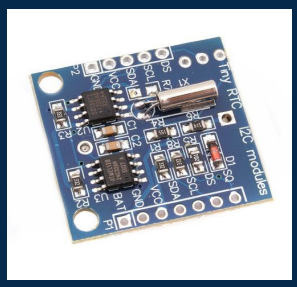

On-Board Devices

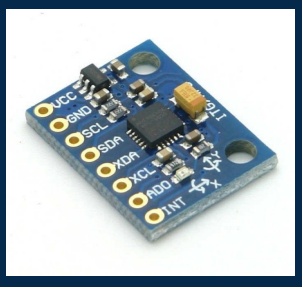

- 8 Status LEDs (Individually programmable)
- One Active Buzzer
- One POT
- 4 Push Buttons with Pull-Up Resistors
- Light Dependent Resistor (LDR)
- On-board 5V and 3.3V Power supply
- All GPIO and Analog Lines Available for expansion boards
- On-Board Headers for common modules

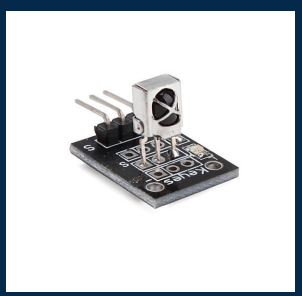

On-Board Headers

- **HC-05 Bluetooth Module**
- **MAX7219 Display Module**
- **DHT11 Temperature and Humidity Module**
- **DS1307 RTC and EEPROM (DS18B20 Option)**
- **MPU6050 3-Axis Gyroscope**
- **I2C Character LCD**
- **I2C OLED Display**
- **IR Remote control Module**
- **USART Header**
- **I2C Header**
- **SPI Header**
